Statutory Authority:

The Revised Code of Washington (RCW) Chapter 39.44 was amended in 1990 as follows:

“Each local government that issues any type of bond shall make a report annually to (the Department of Commerce) that includes a summary of all the outstanding bonds of the local government as of the first day of January in that year. Such report shall distinguish the outstanding bond issues on the basis of the type of bond, as defined in RCW 39.44.200, and shall report the local government’s outstanding indebtedness compared to any applicable limitations on indebtedness, including RCW 35.42.200, 39.30.010, and 39.36.020.”

Important Note: We make all efforts to ensure the accuracy of the data, but it has not been audited and should be read with caution. Commerce assumes no liability for any inaccuracies. We cannot guarantee full compliance with state reporting requirements, so debt issue listings may not be exhaustive. If data from a jurisdiction is not listed, no assumptions should be made about its debt status. Reported issue costs may not be final figures.

SURVEY METHODOLOGY

What data is collected

Each year, the Washington Department of Commerce collects local government general obligation (GO) debt data by surveying nearly 800 cities, towns, counties, and school, library, hospital, and port districts.

GO debt is backed by the credit and "taxing power" of the issuing jurisdiction rather than the revenue from a given project. The amount of debt a jurisdiction may have is limited to a percentage of that jurisdiction's assessed valuation—in other words the value of the taxable property within that jurisdiction's boundaries.

The data gives a snapshot of the jurisdictions' debt at the end of the previous year. *The GO Report*

analyzes and presents that data. Data are collected in the following categories:

- GO debt issuances that were not voter-approved (council-manic).
- Long-term debt that was not voter approved, including categories such as lease-purchase contracts.
- GO debt issuances that were voter-approved.
- Debt service funds restricted to paying off each of the above.
- Revenue debt, special-assessment debt, and government loans.
- Credit ratings.

How the survey is conducted

The 2013 GO debt survey was sent to 778 jurisdictions in July 2014. The survey requested debt data as of August 31, 2013 for school districts and as of December 31, 2013 for all other jurisdiction types.

Jurisdictions were notified to submit their surveys with a packet of survey documents and an email to the previous year's survey respondent at each jurisdiction. Additional follow up was conducted with non-reporting districts by phone near the conclusion of the survey period. All survey data was collected electronically using an online survey tool.

A total of 681 jurisdictions (88 percent) responded to the 2013 survey. The 88 percent response rate was a marginal decline from the previous year's response rate of 91 percent, which approached 2006's high of 93 percent (see Table 1).

Additional data used in the report

In addition to the data collected through the survey, the report uses assessed valuation data collected from the Department of Revenue, and population data collected from the Office of Financial Management. Note that the assessed valuation may not accurately reflect market value.

These outside data sources allow us to analyze each jurisdiction's use of their statutory debt capacity — the main purpose of the report — but also to calculate the per capita debt for city and county debt.

Trends and averages

Every effort was made to collect data from all larger jurisdictions. Note that we have included all jurisdictions for which the Department of Revenue and the State Auditor's Office have unique identifiers. In other words, the data tables include jurisdictions regardless of whether they responded to the survey. Therefore, trend data and averages tend to be more accurate than cumulative totals.

This means that, except for the assessed valuation data, any surveyed jurisdiction that did not complete a survey will have blank spots in the data tables.

It is important to note the difference between a blank and a response of \$0. If \$0 is recorded, it means that the jurisdictions reported they had no debt in that category. A blank space indicates that the jurisdiction failed to report data.

Table 1: Survey Response Rate

Jurisdiction Type	Number Surveyed	No. of Responses	Response Rate (%)
Cities/Towns	281	257	91%
Counties	39	39	100%
School Dist.	295	257	86%
Port Dist.	74	56	76%
Hospital Dist.	56	43	77%
Library Dist.	33	29	88%
Totals:	778	681	88%

READING THE TABLES & CHARTS

General comparisons tables

These tables are a quick, one-page picture of debt for each of the three jurisdiction types that represent the majority of local government debt (counties on page 10, cities on page 16 and school districts on page 36). The general comparisons tables divide the jurisdictions into high-, medium-, and low-valuation clusters.

Organizing the data by valuation clusters helps clarify debt trends, since there are marked differences from one cluster to another in per capita debt and share of assessed valuation and population. Because school district population data was not available, those tables differ from those for cities and counties, instead showing comparisons in the use of voted and non-voted debt.

Voted/non-voted tables and charts

These tables and charts list the top jurisdictions by percentage of debt capacity used, rather than by assessed valuation (counties on page 10, cities on page 17, and school districts on page 37). Pie charts show the differences among valuation clusters as to whether or not jurisdictions sought voter approval prior to issuing debt.

School districts, for example, use a much higher ratio of voted to non-voted debt because their ability to issue non-voted debt is more limited in statute than other jurisdictions.

Trend tables

These tables present a five-year picture of changes in debt — both the total amount of debt and the percent of debt capacity used by each jurisdiction. In addition to listing the five-year data, the trend tables also calculate the percentage of changes in the dollar amount of each jurisdiction's debt and in assessed valuation over a five-year period. Trend tables are on page 12-13 for counties, pages 18-25 for cities and pages 38-45 for school districts.

Trend graphs

Graphs are presented for selected individual jurisdictions based on the completeness of the five-year data and how representative the jurisdictions were of their valuation cluster. Trend graphs on the top show the ratio of voted and non-voted debt in actual dollars. Bottom trend graphs illustrate use of debt capacity by percent for non-voted and total debt. The trend graphs are particularly useful for highlighting notable changes in debt patterns for the individual districts.

Detailed data tables

These are reports pulled directly from our database and represent all data submitted in the GO survey for all six jurisdiction types surveyed. County data begins on page 14, city data on page 26, schools on page 46, and port, hospital, and library districts on pages 57, 62, and 65.

A Few Definitions

■ In the tables \$0 means no GO debt was reported in a given category. A blank space indicates a survey was not submitted, was incorrect and unusable, or no assessed valuation data was available with which to calculate debt capacity.

■ The cluster analysis shown in the *General Comparisons* tables (pages 15, 21, and 41) ranks jurisdictions by assessed valuation because it was deemed more useful in analyzing debt than the more typical approach, which is to group by population.

■ Assessed valuation data is from the state Department of Revenue; population data is from the Office of Financial Management.

■ For space reasons, "AV" refers to a jurisdiction's assessed valuation, and the term "cities" has often been used generically to refer to both cities and towns.

■ The *GO Debt Capacity Detail* tables are broken out by jurisdiction type. Note that the content of some columns varies by jurisdiction type because of differing categories of debt. The calculations used to determine GO debt total figures and statutory capacity percentages are listed near the top of each table page. Negative subtotals – which represent positive cash flow – were converted to \$0, since this report only measures debt. Italicized columns represent figures subtracted from debt subtotal columns.

■ Some tables refer to the "% of Cap." This means the percentage of a jurisdiction's statutory GO debt capacity being used. These limits may be higher than what is needed to maintain a good credit rating, according to *A Debt Primer for Washington's Cities and Towns*. This useful report was published in 1994 (No. 30) by the Municipal Research & Services Center of Washington (<http://www.mrsc.org/>).

SURVEY FINDINGS

Local government debt remains flat

Jurisdictions reported \$29.9 billion overall debt in 2013, including assessment and revenue debt categories — only a \$400 million increase over 2012 almost entirely attributable to increased city/town revenue debt. Just over \$17 billion (57 percent of the total debt reported) is General Obligation debt, continuing a flat-lined trend since 2010 (see voted and non-voted GO debts in Figure 1). This is consistent with the decline in new debt issues in the state as discussed in the 2013 [Public Debt Report](#).

Municipal finance industry professionals in Washington State indicate that jurisdictions are shying away from acquiring new debt for many reasons. At the top of the list are fears of revenue instability if economic conditions degenerate, and reluctance to ask constituents to vote on new debt.

County GO debt concentrated in high-valuation areas

Counties reported \$3.57 billion in outstanding GO debt in 2013, a 2.7 percent increase over 2012. This was entirely attributable to high-valuation counties (see Figure 2). Revenue debt has remained steady, with counties reporting approximately \$3.5 billion annually for the last four years.

Currently, high-valuation counties (King, Snohomish, Pierce, Clark, Spokane, Kitsap, Thurston, Whatcom, and Benton) hold 94 percent of all county GO debt in aggregate. Medium- and low-valuation counties have 5 percent and 1 percent respectively. For more information on county GO debt trends see page 10 and the Map of Debt Capacity Usage on page 8.

City GO debt decreasing all around

Statewide, voted and non-voted GO debt decreased by 2 and 6 percent respectively — totaling \$2.99 billion in 2013. Cities and towns in all valuation categories posted less debt in 2013 than the previous year with the only exception of at 10 percent increase in voted GO debt in high-valuation cities. And yet, because usage of non-voted debt considerably outweighs voted debt, these high-valuation cities posted an overall decrease in debt of \$14.5 million. For more information on city and town GO debt trends see page 16.

Figure 1: Debt Reported by Category, 2009-2013

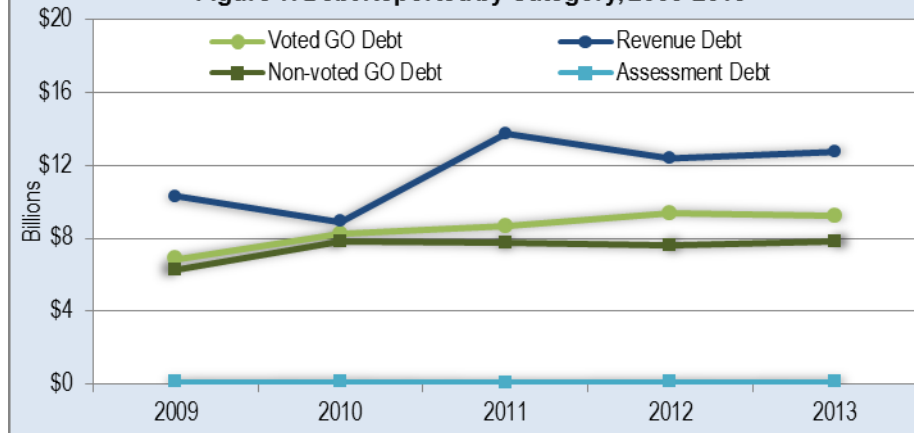

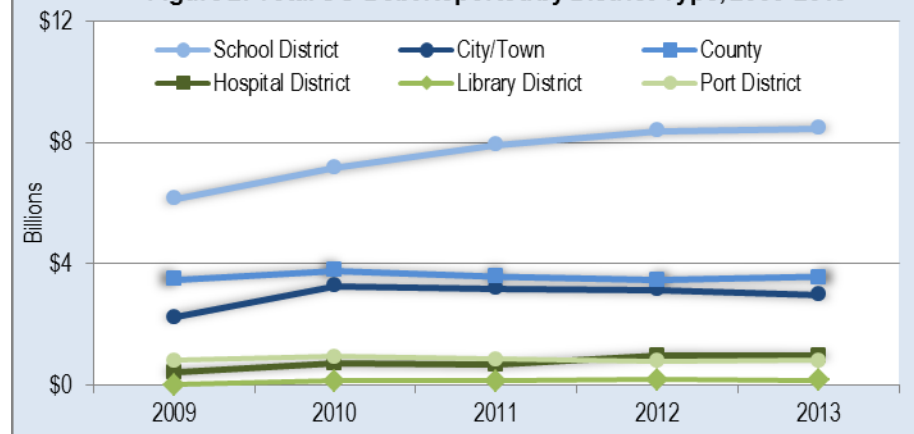

Figure 2: Total GO Debt Reported by District Type, 2009-2013

School district GO debt trending upward

School district debt has increased by 38 percent from 2009 to 2013, with the vast majority (more than 97 percent) being voted GO debt. Unlike cities and counties, where debt is concentrated in high-valuation urbanized areas, school district debt is

SURVEY FINDINGS

distributed fairly evenly among high-, medium-, and lower-valuation districts throughout the state. See the Map of Debt Capacity Usage on page 8 and additional trend analysis beginning on page 9.

Top end of debt capacity usage drops

Four out of six jurisdiction types surveyed (cities/towns, counties, school districts and library districts) posted declines in the top users of debt capacity (Figure 3). Jurisdictions using the highest percentages debt capacity tended to pay down outstanding debt and stayed away from accumulating new debt.

For cities and towns, the top debt capacity usage dropped from 28 percent to 23 percent in 2013 (18 percent decline) and the highest rate in counties dropped from 36 percent to 25 percent (31 percent decline). The recent high for counties was 48 percent of debt capacity used in 2010. The public hospital district with the highest debt capacity usage increased 4 percent from 2012 to 2013, while the statewide average use of capacity for hospital districts decreased by 17 percent (see Figure 5).

Property values creating more local debt capacity

The average use of debt capacity declined for *all* surveyed district types in 2013, even as outstanding debt remained flat (see Figure 5). Two factors influence the phenomena — first is a general decrease in the total debt load carried by jurisdictions. The other is increased valuation of the taxable property used by local jurisdictions to secure this type of debt — with the average in assessed valuation increasing about 6 percent from 2012 to 2013.

For a bit of background, the amount of outstanding debt a jurisdiction is allowed is a percent of the assessed valuation of the taxable property within the jurisdiction's borders because the property tax revenue is pledged to pay for the outstanding debt. The specific percent is set by statute for each jurisdiction type (see the [Debt Limitations Primer](#) for more explanation).

As property values continue to rise in this post-recession era, the amount of debt each jurisdiction is allowed increases proportionally. The two

Figure 3: Highest Percent of Debt Capacity Used, 2012-2013

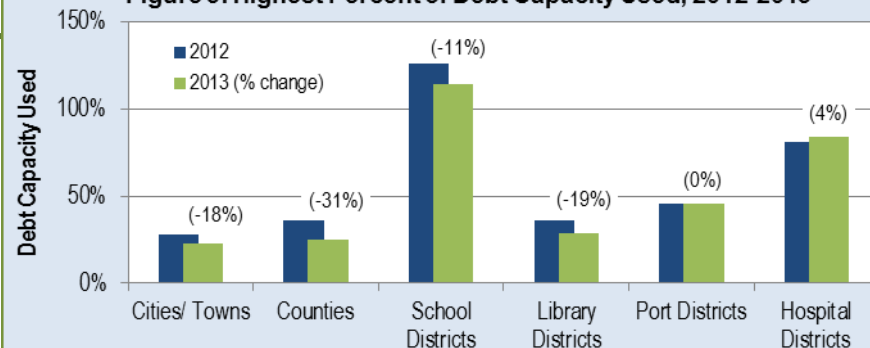

Figure 4: Debt Capacity Usage by Jurisdiction Type, 2013

Dayton	2012	1.5%	1.55%
Tacoma	2012	1.5%	1.68%
Cusick	2008	1.5%	1.77%

Table 3: Total Debt Limitations Exceeded

Jurisdiction Type	Year	Limit	Actual
Snohomish SD 201	2013	5%	5.7%
Snohomish SD 201	2012	5%	6.3%
Snohomish SD 201	2011	5%	6.1%

Table 4: Statutory Debt Limitations

Jurisdiction Type	Limit on Non-Voted GO Debt	Limit on Total GO Debt
Cities/towns	1.5%	7.5%
Counties	1.5%	2.5%
School districts	0.375%	5.0%
Port districts	0.25%	0.75%
Hospital districts	0.75%	2.5%
Library districts	0.1%	0.5%

factors discussed above, steady or declining debt and increased debt capacity, are working together to show the statewide downward trend of debt capacity usage.

As an illustration, a city with increasing property values would have a increased capacity for new debt, even with out paying down any outstanding debt. If that jurisdiction pays down their debt and avoids accumulating new debt, the city usage of debt capacity would decreased because of both factors.

Fewer jurisdictions over the limit

School districts are the only jurisdiction type with a member that exceeded total statutory debt capacity at the end of 2013. Only one city exceeded non-voted debt capacity, but was still in compliance with total debt capacity (see tables 2 and 3). As assessed valuations continue to rise and jurisdictions pay down their debts, districts over the non-voted or total debt limits continue to move closer into compliance.

Going over the debt limit?

State statutes limit local government debt, both voter-approved and councilmanic (not approved by the voters) debt. See Table 4 for a list of debt limits — calculated as a percentage of each jurisdiction’s assessed valuation.

Decreased valuation of taxable property during in the recent economic recession affected local governments by lowering the

available debt capacity. In some instances, the changes in assessed value, combined with other unique factors, were enough to cause a few jurisdictions to temporarily exceed their statutory and/or constitutional debt limit.

The primary implication for a jurisdiction that exceeds a debt limit is that the entity cannot borrow additional money in the category of debt in which it is over. For example, a jurisdiction that had exceeded its non-voted debt capacity but was within its voted debt limit could still obtain debt with voter approval, but could not issue any more councilmanic debt until other non-voted debt was repaid, refinanced, or in another way lowered to comply with the debt limits.

Potential consequences of being over the debt capacity limit include:

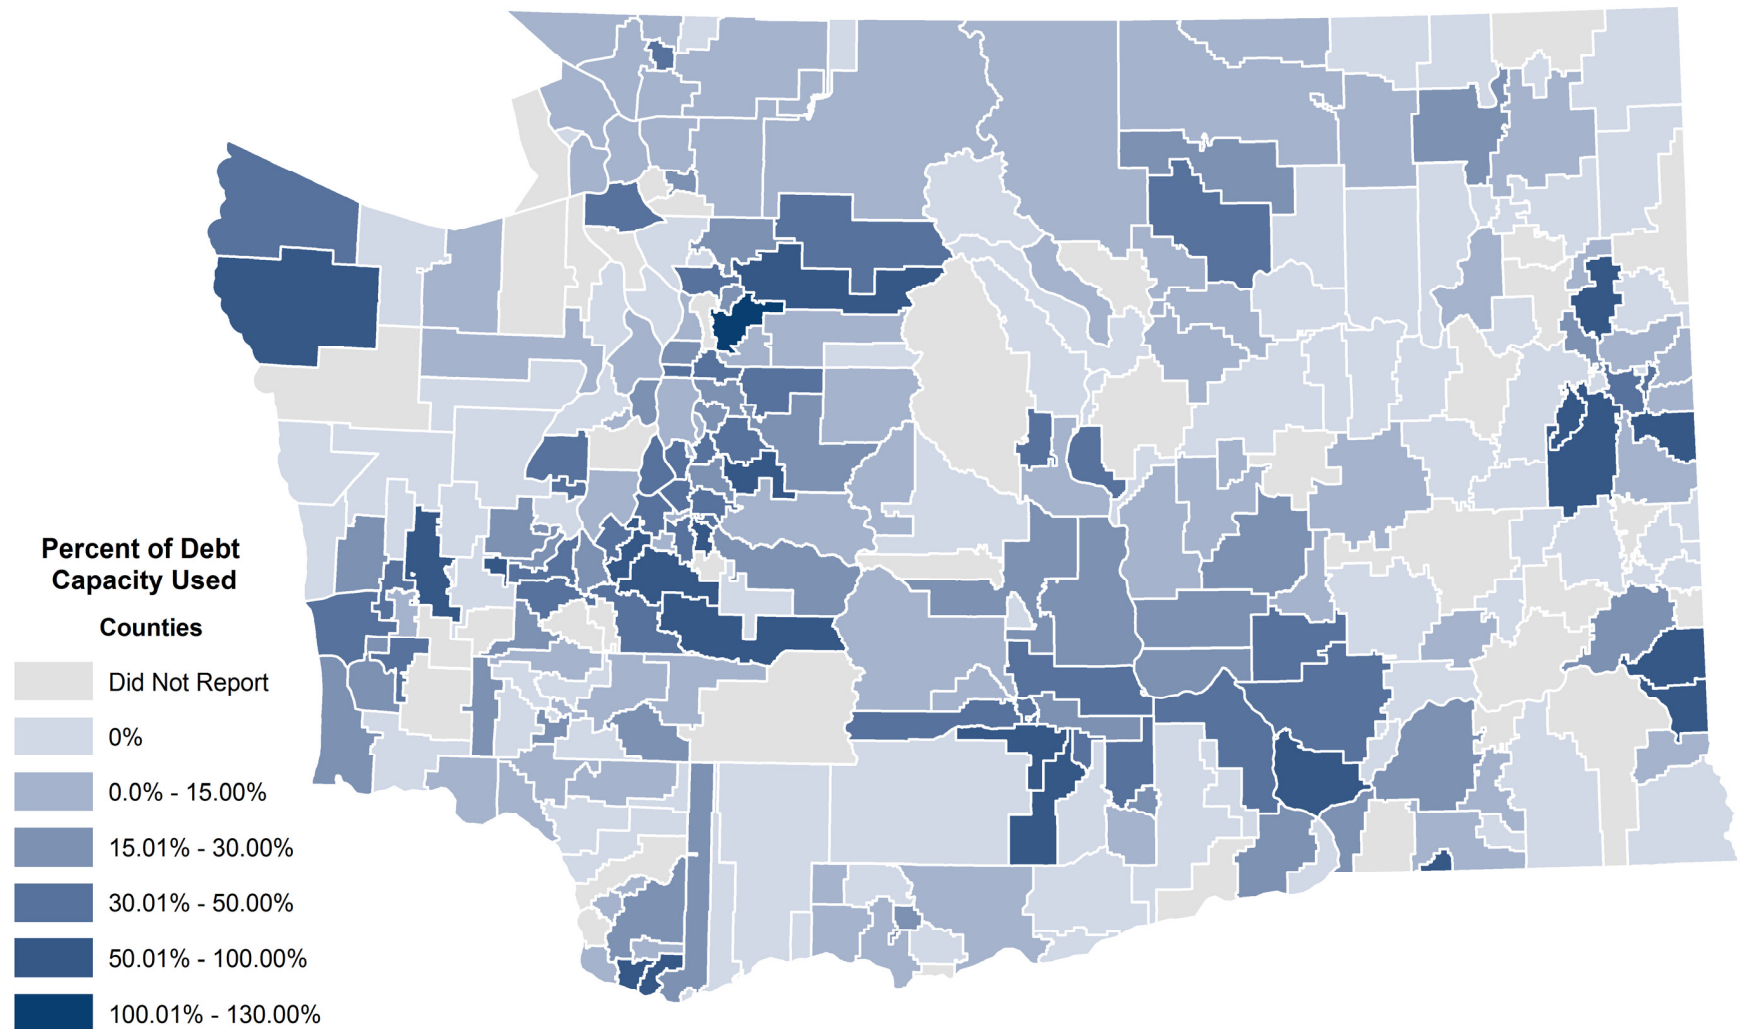

- Inability to acquire more debt, which can have a variety of implications such as: forgoing, cancelling, or putting projects on hold, all of which may have a variety of secondary impacts including increased costs
- Audit findings
- Downgraded credit rating
- Higher future borrowing costs
- Increased oversight
- Potential media coverage
- Potential changes in public opinion and risks to voter approval for future issues.

County and Cities/Towns Use of Total Debt Capacity in 2013

Voted GO Debt

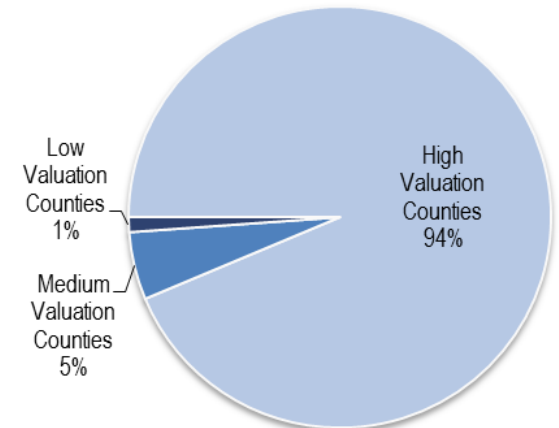

VOTED GO DEBT, ALL COUNTIES

County Name	AV Cluster	Voted GO Debt	% of Voted Capacity*
Asotin	Low	\$8,765,642	23%
Benton	High	\$14,467,486	4%
King	High	\$133,736,000	2%

** Percent of voted capacity is used a comparator between jurisdictions based solely on the amount of voted GO debt each jurisdiction holds. This calculation uses the percent of total debt allowed. However, the actual amount of voted GO debt a jurisdiction is allowed is reduced by the amount of non-voted debt it also holds.*

4 WAYS TO LEARN MORE ABOUT PUBLIC DEBT IN WASHINGTON STATE

- 1. *The GO Report: An Analysis of Outstanding General Obligation Municipal Debt*** — The results of our annual survey of local government debt capacity are available on our [website](#) or by e-mail distribution list.
- 2. *The Public Debt Report: An Analysis of Bond and Other Debt Issues by Local and State Government*** — Our annual wrap-up of debt-issue activity by local and state government is available electronically on our [website](#) or by e-mail distribution list.
- 3. *Monthly listing of debt issue data*** — Available as an Excel spreadsheet on our [website](#) or by e-mail distribution list.
- 4. *Archives of debt issue information*** — “Bond 101” disclosure reports and recent official statements are downloadable on the [Search the Bond 101 Database](#) page of our website. Search for particular bond issuances, then click on “Official Statement” or “Covenants” to download recent documents or an electronic form to request copies of older documents. For customized searches using your own criteria, email buc@commerce.wa.gov or call 360-725-3126.

ALL OF THESE SERVICES ARE FREE. JOIN THE CLEARINGHOUSE’S [DISTRIBUTION LIST](#).
