The GO Report 2002 is published by the Bond Users Clearinghouse

Washington State Dept. of Community, Trade and Economic Development (CTED) 906 Columbia Street SW, PO Box 48350, Olympia WA 98504-2525

Web page: www.cted.wa.gov/, click on "Local Government" tab, then "Community Development Programs" (left box), and "Bond Users Clearinghouse" (left box)

Program Coordinator: Steve Salmi 360/725-3021 or steves@cted.wa.gov

Administrative Assistant: Vernita Shye 360/725-3023 or vernitas@cted.wa.gov

Statutory Authority: The Revised Code of Washington (RCW) Chapter 39.44 was amended in 1990 as follows:

"Each local government that issues any type of bond shall make a report annually to (the Department of Community, Trade and Economic Development) that includes a summary of all the outstanding bonds of the local government as of the first day of January in that year. Such report shall distinguish the outstanding bond issues on the basis of the type of bond, as defined in RCW 39.44.200, and shall report the local government's outstanding indebtedness compared to any applicable limitations on indebtedness, including RCW 35.42.200, 39.30.010, and 39.36.020."

We make all efforts to ensure the accuracy of the data, but it has not been audited and should be read with caution. CTED assumes no liability for any inaccuracies.

CTED cannot guarantee full compliance with state reporting requirements, so debt listings may not be exhaustive. If data from a jurisdiction is not listed, no assumptions should be made about its debt status.

Welcome to a modest experiment

Let's be honest: Many of the municipal officials who fill out our annual outstanding general obligation (GO) debt survey could probably find other things to do with their precious time. So this year we've experimented with new ways to make the resulting report more useful, particularly for survey respondents.

For starters, *The GO Report* is offered in both print and PDF editions (the latter is posted on our web page and sent via e-mail). The low cost of electronic distribution allows us to make the report available to all survey respondents.

We've also strived to increase the usefulness of the data analysis. As in past reports, you'll find a table that lists GO debt levels of jurisdictions by county (see page 16). However, this table now includes more detailed breakdowns of debt categories.

In addition, a variety of tables and charts were created that allow the reader to make apples-to-apples comparisons for the first time. We thought we'd start with counties and cities and find out if readers were interested in seeing this approach used with other jurisdiction types such as school districts.

Also new is debt data for the past five years so readers can view the 2002 data in a historical context (see pages 6 and 10). We included debt-to-population and debt-to-valuation ratios (pages 4 and 8) with the understanding that a robust debate rages about which ratios are most useful.

Many of these improvements were made possible by a significant upgrading of our data-

2002 SURVEY RESPO	NSE RATE		
Jurisdiction Type	No. of Surveys Sent	No. of Responses	Response Rate (%)
Cities	280	256	91%
Counties	39	37	95%
Hospital Districts	8	4	50%
Irrigation Districts	12	10	83%
Port Districts	3	* 10	333%
Public Utility Districts	18	18	100%
School Districts	306	272	89%
Water-Sewer Districts	3	3	100%
Misc.	7	6	86%
TOTAL	676	616	91%

^{*} Port districts distributed the questionnaire among themselves.

bases ... and efforts above and beyond the call of duty by our administrative assistant extraordinaire. Vernita Shye.

Ideas for the future include sending surveys to more junior taxing districts, presenting additional debt ratios, using GIS maps, calculating net direct debt for select jurisdictions, and linking our debt and bond-issue databases so more detailed debt profiles can be offered.

Why change an already useful report? Because better data analysis might plausibly help municipal and state policymakers better understand the increasingly complex budgetary challenges faced by local governments.

Give us your feedback. We'd love to hear your ideas about how to make *The GO Report* more useful to you. Send me a quick e-mail at steves@cted.wa.gov.

- Steve Salmi

SURVEY SCOPE

Questionnaires were mailed in April 2003 to 676 local jurisdictions, and a follow-up letter was later sent to non-respondents. Counties, school districts and "other jurisdictions" received slightly different questions. However, the following data was requested from everyone:

- Non-voted (or councilmanic) general obligation (GO) debt. This includes bonds as well as bond- and grant-anticipation notes but *not* intergovernmental loan agreements, e.g., with the Public Works Trust Fund, Dept. of Ecology or U.S. Dept. of Agriculture. This category does include certificates of participation issued by the state treasurer on behalf of a jurisdiction.
- Voter-approved GO debt, such as bonds, anticipation notes, lease-purchase agreements, and installation sales contracts.
- The total cash, investments and taxes receivable in debt service funds for non-voted or voter-approved debt.

The surveys mainly differed regarding voter-approved debt categories. School districts distinguished between non-capital and capital outlays, whereas other jurisdictions itemized general, utilities and parks debt.

As in previous years, for 2002 only the principal amount of debt was requested, and jurisdictions were not required to report less than \$10,000 for any debt category. Those jurisdictions that did not have any outstanding debt were asked to return a survey so marked.

The figures are for the 2002 fiscal year, which ended on August 31, 2002 for school districts; and December 31, 2002 for all other jurisdictions. Debt capacity in this report represents the statutory — not constitutional — limitations on local governments.

Comparative tables only include 2002 data about jurisdictions that submitted surveys in time for data analysis, but the table on page 16 includes a few late submissions. Seven jurisdictions submitted incorrectly categorized data that could not be calculated; it was not listed. Junior taxing district data provided by counties was not included because their Schedule 09 forms do not list all funds needed to calculate debt capacity figures.

OVERVIEW

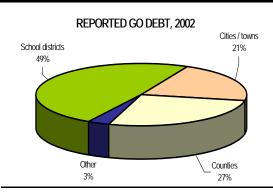

ashington municipalities reported almost \$10.1 billion in outstanding GO debt for 2002. Roughly 44 percent of that was non-voted debt and 56 voted debt. Only 3 percent of GO debt was reported from "other" jurisdictions such as fire, port and public utility districts, but this reflects minimal surveying of these jurisdiction types (see survey response-rate table on page 2).

Comparing 2002 figures with previous years is problematic because of inconsistent non-response rates. Another indicator of debt activity may be the GO debt issues listed in the *Municipal Bonds Monthly Update* (see page 34 for more information on this publication). The total par value of those issues topped \$3.85 billion in 2002, which was 17 percent higher than in 2001 and 118 percent greater than in 2000.

These figures, which were tabulated by the date of issue sales, represent only a partial view of municipal GO debt, e.g., because they do not include outstanding debt from issues dating prior to 2000. The figures do include new issues, refundings and combination offerings. Refundings and combinations grew from 10 percent of total GO par value in 2000 to 54 percent in 2002. However, for 2002 the par value of combinations overshadowed refundings by a two-to-one margin, the opposite of the proportions in 2001.

A cluster analysis of 2002 survey data was conducted to assess the variation in debt levels between jurisdictions with high, medium and low assessed valuation. The tables on pages 4 and 8 show that GO debt is more concentrated in urban centers than population and assessed valuation.

As a case in point, King County comprised 30 percent of the population and 44 percent of the assessed valuation of all counties, but reported

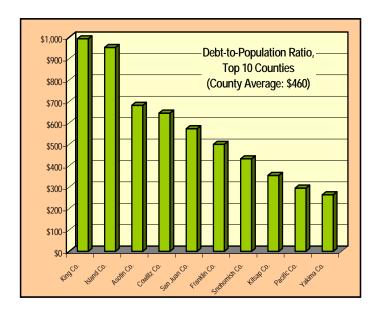

65 percent of GO debt of that jurisdiction type (see page 4). Meanwhile, Seattle represented 16 percent of the population and 25 percent of the assessed valuation of reporting cities, but comprised 51 percent of GO debt (see page 8).

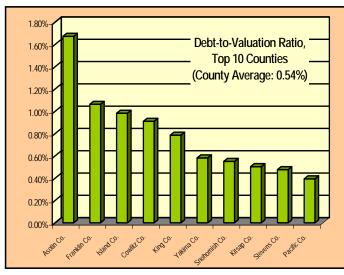

A cluster analysis can mask variations in debt ratios within a group. For example, the average debt-to-population ratio among low-valuation counties was \$215, but ranged from \$682 for Asotin — the third highest among counties — to \$0 for Columbia, Garfield, Skamania and Wahkiakum counties. By the same token, the average population-to-valuation ratio among medium-valuation cities was .39 percent, but ranged from 1.28 percent for Issaquah — the fourth highest among cities — to 0 percent for Auburn, Kenmore, Lakewood, Medina and Shoreline.

The jurisdiction type that tended to use the highest percentage of its statutory taxing capacity was school districts, followed by counties and cities. Entities with low populations and/or assessed valuations usually had the highest percentages (see tables on pages 5, 9 and 16). During 1998-2002 debt in dollars increased more quickly than assessed valuation for a greater proportion of counties than cities (pages 6 and 10).

READING THE DATA

- Year-to-year comparisons of statewide debt data have only been used with jurisdiction types where the response rate has been consistent enough to not significantly skew totals.
- > In the tables \$0 means no GO debt was reported in a given category. A blank space or "N/A" designates when a survey was not submitted, was submitted after data analysis began, or was incorrect and unusable.
- > The cluster analysis shown in the *General Com*parisons tables (pages 4 and 8) ranks jurisdictions by assessed valuation because it was deemed more useful in analyzing debt than the more typical approach, which is to group by population.
- Assessed-valuation data is from the state Department of Revenue, and population data is from the Office of Financial Management.
- > For space reasons the term "cities" has often been used generically to refer to both cities and towns.
- > In the *GO Debt, All Jurisdictions* table (see page 16) Total GO debt (col. N) is the sum of non-voted (col. F) and voted debt (col. L). Non-voted debt was calculated with the following formula: (col. B-C)+(D-E). Voted debt used the formula: (H+I+J)-K. Negative subtotals which represent positive cashflow were converted to \$0, since this report is only measuring debt. Columns C, E and K, which represent various types of funds on hand, were italicized to emphasize that they were subtracted from debt subtotal columns.
- > Some tables refer to the "% of Cap." (e.g., pages 5, 9 and 16). This means the percentage of a jurisdiction's statutory GO debt capacity being used. These limits may be higher than what is needed to maintain a good credit rating, according to *A Debt Primer for Washington's Cities and Towns*. This useful report was published in 1994 (No. 30) by the Municipal Research & Services Center of Washington (http://www.mrsc.org/).

THE GO REPORT 2002 — www.cted.wa.gov, click Local Government / Community Development Programs / Bonds Users Clearinghouse — PAGE 4

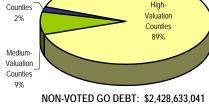

Total outstanding GO debt rose 7 percent in the last year among reporting counties, from roughly \$2.54 billion in 2001 to almost \$2.72 billion in 2002.

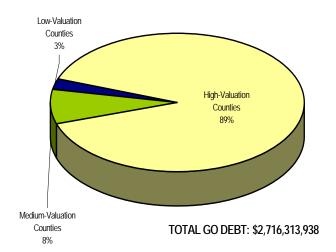

For 2002, high-valuation counties generated the same percentage of non-voted, voted and total debt: 89 percent (see page 4 for how counties are grouped according to assessed valuation). However, low- and medium-valuation counties traded places when it came to their proportion of non-voted and voted debt. Low-valuation counties garnered only 2 percent of non-voted debt, but 9 percent of voted debt. Two counties, Asotin and Franklin, largely accounted for the high level of voted debt in the low-valuation cluster. These two counties ranked first and second in the percentage of debt relative to both their voted and total outstanding GO debt capacity.

Two medium-valuation counties, Cowlitz and Island, ranked first and second in the percentage of non-voted debt. Nevertheless, in dollar terms King County dwarfed other reporting counties in all three categories. Snohomish County used only 22 percent of its total capacity, but its \$271 million in debt ranked second only to King's \$1.76 billion. By the same token, Clark County almost topped \$100 million in total debt but used only 15 percent of its capacity.

VOT	VOTED GO DEBT, ALL COUNTIES							
Rank	Name of Jurisdiction	Assessed Valuation Cluster	Voted GO Debt	% of Voted Capacity

THE GO REPORT 2002 — www.cted.wa.gov, click Local Government / Community Development Programs / Bonds Users Clearinghouse — PAGE 5

Reporting counties displayed a wide variation in their outstanding total GO debt loads between 1998 and 2002, both in dollar terms and as a percentage of debt capacity.

Asotin used the largest proportion of its debt capacity in 2002 (67%), but since 1999 this county's debt has slightly declined in dollar terms, and the percentage of Asotin's used debt capacity dropped by 18 points. In contrast, second-ranking Franklin County, whose 2002 debt capacity was 43 percent, saw its debt more than double and its used capacity increase 18 points since 1998 (see page 5 for 2002 rankings).

Relatively few counties had flat debt amounts during this period. Spokane County's debt grew 1 percent in dollars, and Clallam County reported zero debt throughout the entire five-year period. King County's debt load rose 2 percent between 1999 and 2002 (figures for 1998 were not reported), but substantial growth in assessed valuation resulted in an 11-point drop in the percentage of debt capacity used.

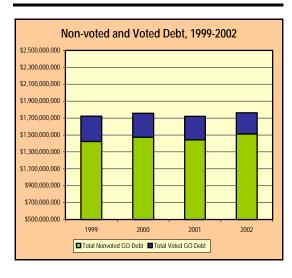

The 17 counties that saw their debt levels increase in dollar terms between 1998 and 2002 were fairly equally distributed in the high-, medium- and low-valuation clusters. This contrasted with those counties whose debt levels dropped; seven out of 12 were in the low-valuation cluster.

Only half of the counties with complete data saw debt (in dollars) increase faster than assessed valuation during 1998-2002. Indeed, two of the faster-growing counties, Thurston and Klickitat, reported declining debt levels.

THE GO REPORT 2002 — www.cted.wa.gov, click Local Government / Community Development Programs / Bonds Users Clearinghouse — PAGE 8

Low-valuation cities and towns generated almost twice as large of a share of voted GO debt than they did non-voted debt (see pie charts to your right). Indeed, only five medium- or high-valuation cities made it onto the top 25 list of cities regarding voted debt, which is ranked by those who have used the largest percentage of their debt capacity (see chart below left). Low-valuation cities made up more than half of the top 25 rosters for non-voted and total debt (see below center and right). However, Seattle ranked third both in non-voted and total debt.

THE GO REPORT 2002 — www.cted.wa.gov, click Local Government / Community Development Programs / Bonds Users Clearinghouse — PAGE 9

CITIES/TOWNS, 1998-2002 Sorted alphabetically

The accompanying table shows the variability of GO debt levels over time. For example, Ocean Shores, Selah, Ellensburg and Union Gap saw the percentage of their used debt capacity increase substantially in 2002 over previous years, whereas Seattle, Issaquah and Shelton saw their percentages decline to varying degrees.

Among cities that submitted data in 1998 and 2002, only 23 percent increased their GO debt in dollars by a greater percentage than their assessed valuation grew (see the last two columns on the right). In addition, one third of reporting cities saw their debt in dollars fall.

These proportions varied by valuation cluster. Twenty percent of high-valuation cities saw their debt in dollars fall between 1998 and 2002, compared to 47 percent for medium-valuation cities and 32 percent for low-valuation cities.

Among the 50 reporting cities with the largest percentage increases in assessed valuation during 1998-2002, only 30 percent saw their debt in dollars grow by a greater proportion than assessed valuation. These included Snoqualmie (713% vs. 264%), Issaquah (111% vs. 102%), Gold Bar (232% vs. 59%), Stanwood (207% vs. 57%), Marysville (75% vs. 51%), Pasco (74% vs. 48%) and Woodinville (252% vs. 45%).

Debt in dollars dropped for 42 percent of the 50 cities with the largest percentage increases in assessed valuation during 1998-2002. These included Arlington (-97% vs. 104%), Bonney Lake (-23% vs. 89%), Medina (-100% vs. 83%) and Yarrow Point (-72% vs. 74%).

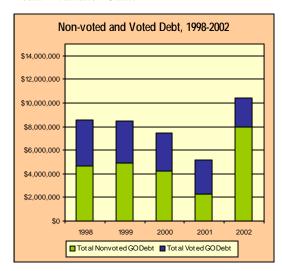

All of the above figures do not include the 22 percent of cities that did not provide complete data for both 1998 and 2002, the vast majority of which were from the low-valuation cluster.

BOND USERS CLEARINGHOUSE

> MUNICIPAL BONDS IN WASHINGTON MONTHLY UPDATE NEWSLETTER

Electronic edition: Identical to the print version except for stylish splashes of color. This is a PDF document e-mailed up to two weeks earlier than the print edition, because it doesn't need to be published and snail mailed. This edition also saves state dollars on printing and postage. Back issues are posted on our web page.

Print edition: Generally mailed the third week of each month.

> SPREADSHEET OF BOND ISSUE DATA

Available as an Excel 2000 file and e-mailed when the Monthly Update is distributed electronically. Not posted on web site.

> ARCHIVES OF BOND ISSUE INFORMATION

To receive a copy of an official statement or Bond 101 report form, please fill out a "Bond Issue Info Request Form" on our web site.

> THE GO REPORT: AN ANALYSIS OF LOCAL GOVERNMENT OUTSTANDING GENERAL OBLIGATION DEBT

Electronic edition: This PDF document is sent as an e-mail at the beginning of each year, and is posted on our web site.

Print edition: Mailed roughly three weeks after going to press.

To get on a distribution list, please fill out the subscription form posted on our web page
