# Forward

The Washington State Fuel Mix Disclosure process is designed to provide utilities with an assessment of their mix of fuel sources associated with the generation of the electricity used to serve their customer demand. The data supporting the process includes tabulated datasets from utilities and public agencies, as well as manually entered data.

If you have any questions about the information contained in this report, contact our office at 360-725-3112.

# About the Washington State Electric Utilities Fuel Mix

The fuel mix disclosure law, RCW 19.29A, requires Washington State utilities to report to electricity consumers the sources of power they use to serve them. The law defines how the utility “fuel mix” should be calculated, which fuel categories to use, and how utilities should share this information with customers. The Department of Commerce (Commerce) collects the data supporting this effort; the fuel mix values and associated carbon dioxide emissions are calculated and summarized for utility and state level mix information.

## How is a utility's fuel mix determined?

The objective of the fuel mix disclosure process is to inform customers and policy makers about the characteristics of the electricity delivered by each retail supplier to consumers and businesses. Most retail suppliers use electricity from multiple sources, even if they operate their own power plants. In some cases, retail suppliers obtain power without knowing the specific generation source. Power serving Washington utilities comes from three sources: 1) specific power plants, 2) the Bonneville Power Administration (BPA), and 3) unspecified power. Unspecified power is electricity obtained in a transaction where the seller does not identify a specific generating source, typically through short-term transactions in the bulk power markets.

In order to build a fuel mix picture for each utility, Commerce uses information reported by each utility about the quantity (megawatt-hours) of electricity from specific generating plants. The fuel source for the specified generating plants is provided by the U.S. Energy Information Administration (EIA). The fuel mix law requires that a utility have documentation of ownership or contractual rights from a specific generating facility in order to report a claim on that resource. To protect against double counting of renewable energy sources, Commerce relies on the ownership of renewable energy certificates as evidence that the utility owns the right to make this claim.

Many utilities serve their retail customers using electricity provided by BPA. The BPA provides Commerce with information about the mix of resources used to generate this electricity. The PNGC cooperative also provides some member utility information to Commerce.

## Changes for the 2019 report: Power Source Disclosure (Fuel Mix) 2019 Legislative update

- Engrossed Substitute House Bill [1428](#) reforms the fuel mix statute enacted in 2000 ([19.29A RCW](#)). This law requires that electric utilities disclose to their customers the fuels used to generate their electricity. Commerce requested this legislation to make much-needed updates to the law and to improve the accuracy and timeliness of the reports.
- For utility customers, the biggest change will be a new category on the disclosure label for “unspecified sources.” Utilities do not always know the sources when they purchase electricity, and the existing law required that Commerce assign fuel shares to this power. Instead, unknown sources will simply be listed as a separate category.

- The law makes other changes that are less obvious but important to the integrity of utility power source disclosures. Utilities will be required to include known sources of electricity generation, and utilities are not allowed to make renewable energy claims if they have transferred or sold the renewable energy certificates associated with that electricity.

### What is the source of information for this report?

The U.S. Energy Information Administration (EIA) publishes generation and fuel consumption data for each power plant in the United States in its report EIA-923. EIA publishes its “early release” version of the EIA-923 report on approximately June 31 each year for the previous calendar year. The “early release” version is subject to revision after publication. The EIA reports are available at [www.eia.gov/electricity/data/eia923/](http://www.eia.gov/electricity/data/eia923/).

Washington state electricity sector emissions are determined using the prorated EIA-923 fuel consumption information for all state power claims in combination with fuel specific emission rate data. Commerce has developed fuel specific emission rate database using information available from the EIA and the U.S. Environmental Protection Agency.

### How is information presented in this report?

State level fuel mix information, expressed as energy (MWh) and fuel type is presented first. The state level information is the aggregate of all of the calculated individual utility fuel mix values. A state level time fuel mix series is also presented. The Northwest Power Pool (NWPP) Generation Mix information is presented next. Following these tables and figures is a full description of the fuel mix for each electric utility in the State.

### Glossary

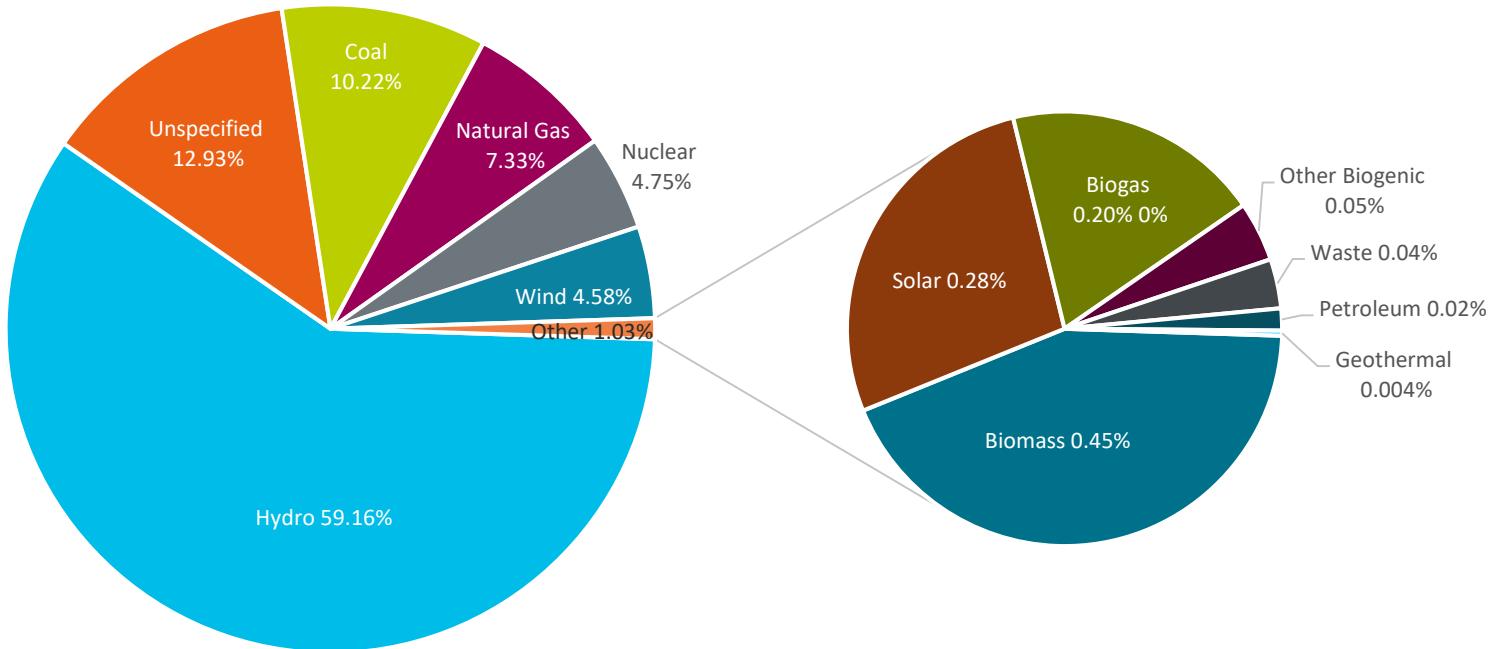

- “Claims on Resources” refers to power obtained from specific generation facilities, with fuel source information obtained from the US Energy Information Administration.
- “Unspecified Power Purchase” refers to power purchases where the generation facility and fuel source information is not known.
- “BPA Resource Mix” includes only the portion of delivered BPA power that can be attributed to specific plants. The portion of BPA power that cannot be connected with a specified plant or fuel source is labelled as unspecified.
- “BPA Claims” includes only the portion of delivered BPA power that can be attributed to specific plants.

# Washington State Electric Utilities: 2018 Graphs and Tables

## Washington State Aggregate Fuel Mix

The Washington “fuel mix” is the state aggregate of fuel sources associated with the electricity delivered by all electric utilities to end users in the state of Washington, including Bonneville Power Administration’s direct electricity sales. It includes all electric power that is used to serve retail customers that is owned, purchased under contract, or purchased on the spot market.
