# Forward

RCW 19.29A.060 requires each electric supplier, or utility, serving retail customers in Washington to disclose to its customers the mix of fuels used to generate the electricity sold to those customers in the previous year. Utilities must disclose the information, similar to a content label on a food product, to new customers and post the information on their public websites. The data supporting the process includes tabulated datasets from utilities and public agencies, as well as manually entered data.

If you have any questions about the information contained in this report, contact our office at [energydata@commerce.wa.gov](mailto:energydata@commerce.wa.gov).

# About Fuel Mix

[Chapter 19.29A RCW](#) requires Washington electric utilities report to customers the sources of power used to serve them. The law defines how the utility “fuel mix” should be calculated, which fuel categories to use, and how utilities should share this information with customers. Commerce collects the data supporting this effort; the fuel mix values and associated greenhouse gas emissions content are calculated and summarized for utility and state level mix information.

## How is a utility's fuel mix determined?

The objective of this process is to inform customers and policy makers about the characteristics of the electricity delivered by each utility to consumers and businesses. Most utilities use electricity from multiple sources, even if they operate their own power plants. In some cases, utilities obtain power without knowing the specific generation source. Power in Washington comes from three sources: specific power plants, the Bonneville Power Administration (BPA), and unspecified power purchases. Unspecified power is electricity obtained in a transaction where the seller does not identify a specific generating source. These are typically short-term transactions in bulk power markets.

To build a fuel mix picture for each utility, Commerce uses information reported by each utility about the quantity (megawatt-hours, represented as MWh) of electricity from specific generating plants. The fuel source for the specified generating plants is provided by the U.S. Energy Information Administration (EIA). [Chapter 19.29A](#) requires that a utility have documentation of ownership or contractual rights from a specific generating facility to report a claim on that resource. To protect against double counting of renewable energy sources, The State Auditor verifies the ownership of renewable energy certificates as evidence that the utility owns the right to make this claim.

Many utilities serve their retail customers using electricity provided by BPA. BPA provides Commerce with information about the mix of resources used to generate this electricity. PNGC Power, an electric generation and transmission cooperative, also provides information to Commerce on behalf of some member utilities.

## Post-2019 fuel mix disclosure reports

In 2019, the Legislature enacted [Engrossed Substitute House Bill 1428](#) to reform the fuel mix statute ([Chapter 19.29A RCW](#)). Commerce requested this legislation to make much-needed updates to the law and to improve the accuracy and timeliness of the reports.

For utility customers, the biggest change was a new category on the disclosure label for “unspecified sources.” Utilities sometimes purchase electricity without requiring that the seller identify the source of that electricity. For example, power transactions to balance supply and demand on an hour-by-hour basis are typically unspecified. Prior to the 2019 change, the law had required that Commerce assign fuel shares to this power. Instead, unknown sources are now listed as a separate category.

## What is the source of information for this report?

The primary source of information in this publication is the reports of individual utilities of the source and disposition of electricity supplies. A secondary source is the U.S. Energy Information Administration (EIA) report of generation and fuel consumption data for each power plant in the United States in its report EIA-923. EIA publishes its “early release” version of the EIA-923 report on approximately July 31 each year for the previous calendar year. The “early release” version is subject to revision after publication. The EIA reports are available at [www.eia.gov/electricity/data/eia923/](http://www.eia.gov/electricity/data/eia923/).

## **How is information presented in this report?**

State level fuel mix information, expressed as energy (MWh) and fuel type, is presented first. The state level information is the aggregate of all of the calculated individual utility fuel mix values. A state level historical series is also presented. Following these tables and figures is a full description of the fuel mix for each electric utility in the state.

## **Glossary**

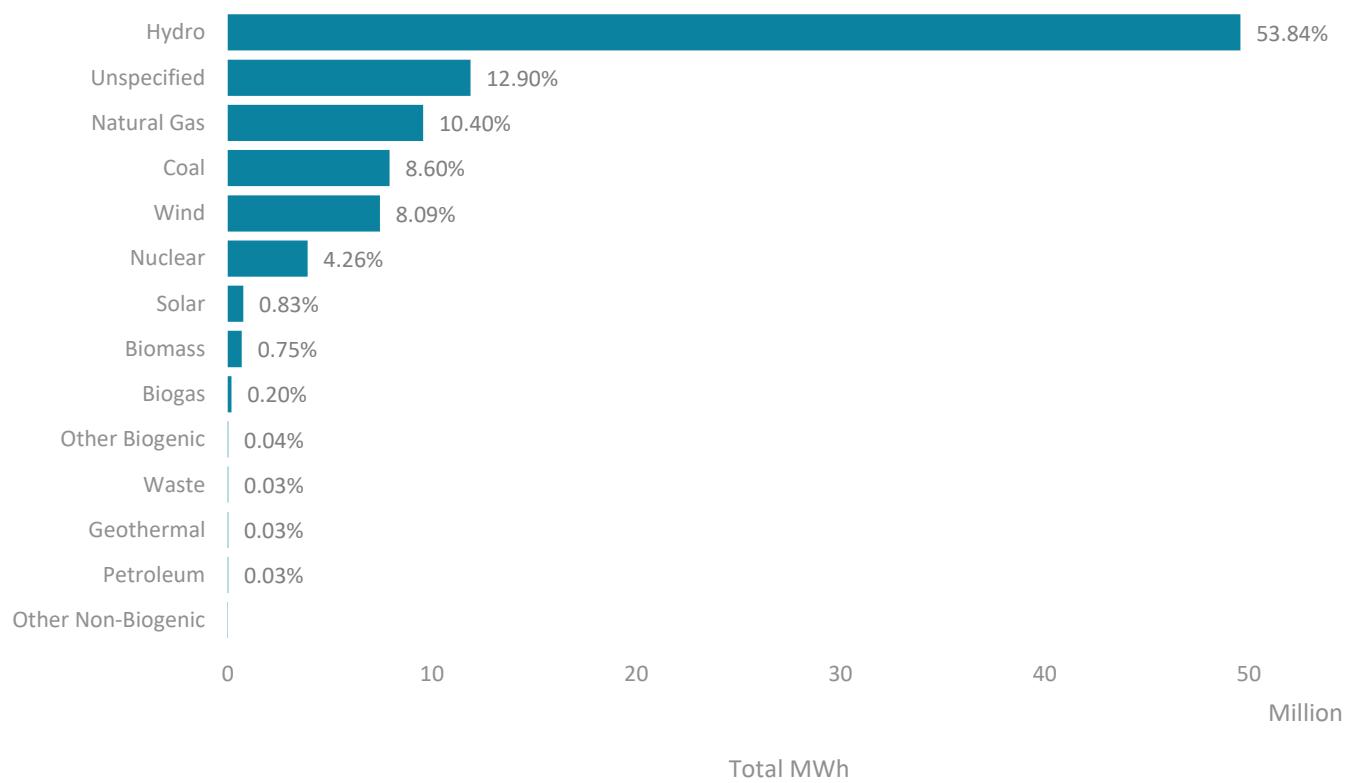

- “Claims on resources” refers to power obtained from specific generation facilities, with fuel source information obtained from the U.S. Energy Information Administration.
- “Unspecified power purchase” refers to power purchases where the generation facility and fuel source information is not known.
- “BPA resource mix” includes only the portion of delivered BPA power that can be attributed to specific plants. The portion of BPA power that cannot be connected with a specified plant or fuel source is labeled as unspecified.
- “BPA claims” includes only the portion of delivered BPA power that can be attributed to specific plants.

# Graphs and Tables

The Washington fuel mix is the state aggregate of fuel sources associated with the electricity delivered by all electric utilities to end users in Washington, including Bonneville Power Administration's direct electricity sales. It includes all electric power that is used to serve retail customers that is owned, purchased under contract, or purchased on the spot market.

Figure 1 presents the fuel sources associated with electricity to end users in Washington for calendar year 2022. Hydropower (53.84%) is the largest primary fuel used to produce electricity in the state. Unspecified power is the second largest category (12.90%), followed by natural gas (10.40%) and coal (8.60%). Table 1 lists the electricity fuel sources by MWh and percent.

**Figure 1: 2022 Aggregate Fuel Mix for Washington Electric Utilities**

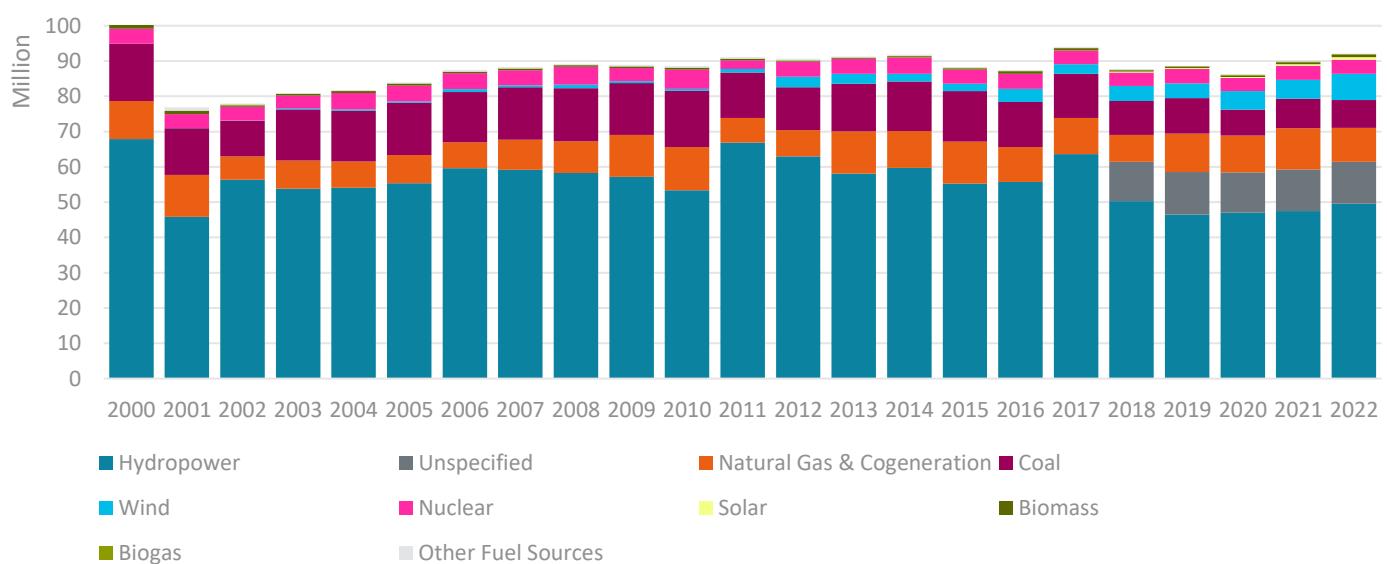

**Table 1: 2022 Aggregate Fuel Mix for Washington Electric Utilities**

Fuel Type	Total Electric Power MWh	Percentage
Hydro	49,583,521	53.84%
Unspecified	11,885,124	12.90%
Natural Gas	9,574,626	10.40%
Coal	7,921,025	8.60%

Fuel Type	Total Electric Power MWh	Percentage

Other Non-Biogenic	-237	0.00%
<b>Grand Total</b>	<b>92,098,707</b>	<b>100.00%</b>

**Figure 2: Aggregate Fuel Mix Time Series (MWh) for Washington Electric Utilities<sup>1</sup>**

<sup>1</sup> As described above, the method of reporting claims on unspecified sources changed in 2019 (which affected calendar year 2018 fuel mix). Before 2019, the fuel mix law required that Commerce assign a fuel mix to unspecified sources based on regional data.

**Table 2: Aggregate Fuel Mix Time Series (MWh) for Washington Electric Utilities**
